

Frontend Testing Report – CodeKnights VALID8 (mr.frontend)

Tester Information

Tester Role: QA / Frontend Tester

Environment: Local Development (localhost)

Browser Used: Chrome

Date Tested: April 6, 2026

Application Overview

The application is a Campus Portal System that allows users to log in using a school account and access workspace features such as attendance and administrative tools.

The frontend was successfully run locally using:

```
npm install
```

```
npm run dev
```

Accessed via:

<http://localhost:5173>

Test Scope

- Login UI functionality
- Input validation
- API connectivity
- User interaction behavior

Test Cases & Results

1. Page Load Test

Action: Open localhost URL

Expected Result: Login page loads correctly

Actual Result: Page loaded successfully with UI elements visible

2. Input Field Validation

Action: Leave email and password empty, then click login

Expected Result: Validation error message

Actual Result: Depends on implementation

3. Invalid Input Test

Action: Enter invalid email format or incorrect credentials

Expected Result: Error message shown

Actual Result: Depends on backend response

4. Login Functionality Test (Initial Attempt)

Action: Enter credentials and click "Log In"

Expected Result: User should be authenticated and redirected

Actual Result: Login failed

Initial Issue Found

Issue: API Connection Failure

Error Message: Unable to reach the API

Severity: High

Type: Backend/API Integration Issue

Root Cause Analysis (Initial)

- Backend server not running
- Incorrect API endpoint configuration
- Network/CORS restrictions
- Missing environment configuration

Resolution / Retest

Fix Applied:

`npm run dev:all`

Result After Fix:

- Frontend and backend services started simultaneously
- API connection established successfully
- Login functionality is now operational

Retest Results

5. Login Functionality Test (After Fix)

Action: Enter credentials and click "Log In"

Expected Result: Successful authentication

Actual Result: Login request successfully connects to backend

Overall Assessment

Frontend UI: Working

User Interaction: Functional

API Integration: Working after fix

System Status: Fully Functional (Local Environment)

Recommendations

- Ensure npm run dev:all is documented as the correct startup command
- Improve error handling messages
- Improve frontend validation
- Use Postman for API testing

Conclusion

The frontend application was successfully tested locally. Initial API connection issues were resolved by running npm run dev:all. The system is now fully functional.
