

Proper Mailing System Enhancement Report Purpose

This document describes the enhancements applied to the Aura Mailing System to address formatting issues, enforce sender requirements, and ensure proper email delivery functionality.

The improvements were implemented to satisfy the following criteria:

- Fix buggy mailing system
 - Implement proper email format
 - Enforce sender email noreply-aura@gmail.com
 - Test and validate email delivery
 - Push finalized changes to GitHub repository
-

The mailing system was enhanced to improve:

- Email formatting structure
 - Sender configuration
 - Delivery reliability
 - System maintainability
 - Testing capability
-

Changes Implemented

1. Email Format Enhancement

The previous mailing system used inconsistent formatting and lacked a structured layout. The system was enhanced to include a professional email structure:

New Email Format Structure

- Header (Aura System Branding)

- Email Body Content
- Sender Identification
- Footer (Automated Message Notice)

Example Structure

Aura System Header

Hello User,

This is an automated email from Aura System.

Sender: noreply-aura@gmail.com

Best Regards,

Aura System

Result

- Improved readability
- Professional email appearance
- Consistent format across all emails

2. Sender Email Enforcement

System Requirement:

noreply-aura@gmail.com

The sender email was standardized in the transport layer.

File Modified

app/services/email_service/transport.py

Code Change

```
message["From"] = "Aura System <noreply-aura@gmail.com>"
```

Effect

- Consistent sender identity
 - Requirement compliance
 - Improved email delivery reliability
-

3. Test Email Implementation

A test email function was used to validate the mailing system.

Function Used

```
send_test_email()
```

Purpose

- Verify email sending functionality
 - Confirm proper formatting
 - Validate sender configuration
-

Files Modified

The following files were modified:

1. Email Transport

app/services/email_service/transport.py

Changes:

- Email format enhancement
- Sender email enforcement
- Test email configuration

2. Email Interface

app/services/email_service/__init__.py

Changes:

- Updated email exports
- Improved transport imports

Testing Procedure

The system was tested locally using Docker.

Step 1 — Build Backend

Command used:

```
docker build -t aura-backend .
```

Step 2 — Run Backend Container

Command used:

```
docker run -p 9001:8000 --env-file .env aura-backend
```

Step 3 — Verify Backend Running

Backend accessed through browser:

<http://localhost:9001/docs>

Alternative endpoint:

<http://localhost:9001/redoc>

Step 4 — Test Email Endpoint

Tested function:

`send_test_email`

Input Example:

```
{  
  "recipient_email": "testemail@gmail.com"  
}
```

Git Push Procedure

After confirming enhancements, changes were pushed to GitHub.

Step 1 — Check Branch

```
git branch
```

Step 2 — Add Changes

```
git add .
```

Step 3 — Commit Changes

```
git commit -m "Enhanced Proper Mailing System"
```

Step 4 — Push to Branch

Branch Used:

Aura_email2.0

Command:

```
git push origin Aura_email2.0
```

Result

The mailing system is now:

- Properly formatted
- Sender standardized

- Email delivery improved
 - Tested locally
 - Successfully pushed to GitHub
-

Conclusion

The Proper Mailing System enhancement successfully addressed the original issues:

- Buggy email formatting fixed
- Sender requirement enforced
- Email system tested
- Changes committed and pushed

The mailing system is now ready for further validation and deployment.
